TYPOGRAPHY REFINEMENT · DESIGN PROPOSAL · FOR FOUNDER REVIEW

Quiet confidence, in type

A focused refinement of Klinnova's typography: lighter weights, stronger size hierarchy, disciplined spacing. Nothing about the palette, the mark, the IA, or product behaviour is reopened. This document is set in the proposed system itself, so it doubles as its own specimen.

01 Recommendation 02 Assessment 03 Principles 04 A/B/C 05 Scale 06 Candidate 07 Employer

08 Auth 09 Long-form 10 Accessibility 11 Tokens 12 Migration 13 Decisions

01 — EXECUTIVE RECOMMENDATION

Adopt the system-native stack. Cut the heavy weights. Let size and space do the work.

1. Variant A wins

The system-native stack (`-apple-system` → Roboto → Segoe UI) is the recommendation. It renders instantly, costs nothing on the network, and gives Klinnova the exact typographic character the founder described — because on Apple platforms it *is* that typography, legitimately, with no font licensing exposure.

2. Weight ceiling: 600

700 leaves the system entirely. Display and headings move to 600; navigation and metadata to 400–500; body stays 400. 300 is not used for any content a candidate needs to read.

3. Body up to 16px

Candidate body copy moves from 15px to 16px with line-height 1.55. This is the single highest-value change in the document for an audience reading employment terms in a second language.

4. One conflict to report

The bound design system specifies DM Sans as the UI face and tight `-0.03em` to `-0.05em` heading tracking. Variant A departs from both. Reported, not silently applied — see section 13.

02 — CURRENT TYPOGRAPHY ASSESSMENT

What the approved system does today, and where it strains

ASPECT	TODAY	ASSESSMENT
Family	DM Sans, all weights via Google Fonts	Warm and legible, but pays a webfont round-trip on every first load, and its lowercase is slightly wider than the system faces — long German compounds run out of room sooner.
Weight usage	700 for h1/h2/display, 600 for h3 and captions	The main issue. 700 on a 22px heading next to 15px/400 body creates contrast by mass rather than by proportion. Reads capable, not calm.
Body size	15px / 1.65	Adequate on desktop, tight for a second-language reader on a 390px screen. 1.65 is slightly loose for compact UI while being right for long-form — one value doing two jobs.
Heading tracking	-0.03em to -0.05em	-0.05em is too tight below 28px; at 17–22px it starts closing counters, which hurts exactly the readers who need clarity most.
Small labels	11–12px, 600, tracking 0.05–0.12em	0.12em uppercase tracking is a decorative device. Status labels are functional; they should not be styled like eyebrows.
Numerals	Proportional throughout	Employer tables (applicant counts, dates, rates) misalign column-to-column. Tabular numerals are warranted there and nowhere else.
Line length	Not specified	No max-width rule means long-form legal text can span a 1440px viewport. Needs an explicit ceiling.

03 — PRINCIPLES WORTH TRANSLATING

Five borrowed disciplines, and what each becomes at Klinnova

DISCIPLINE	KLINNOVA TRANSLATION
Hierarchy by proportion	A page title is 28px/600 against 16px/400 body — a 1.75× size ratio doing what a weight jump from 400 to 700 used to do. Weight becomes the second signal, never the first.
Restraint in weight	Three weights only: 400, 500, 600. Removing 700 removes the temptation to solve every hierarchy problem by bolding.
Optical tracking	Tracking scales with size, not by decree: -0.028em at 40px+, -0.021em at 25–32px, -0.01em at 17–22px, 0 at body and below. Nothing below 17px gets negative tracking.
Space as structure	Documented vertical relationships (section 05) rather than ad-hoc gaps. This is where most of the perceived quality comes from, not the font.
Native rendering	Text paints on the first frame. No FOIT, no reflow, no layout shift — a real accessibility benefit on the slow connections this audience often has.

Klinnova's typography principle

Quiet confidence. Important things read as important because they are well positioned, clearly sized, properly spaced and consistently presented — not because they are heavy. Bold is used intentionally, never habitually. Where legibility and elegance disagree, legibility wins without discussion.

Explicitly not borrowed: page layouts, marketing composition, imagery, icons, navigation patterns, component designs, copy conventions, animation signatures. Only the weight/size/space discipline and the system-font premise. No proprietary font files are bundled or redistributed — the stack simply asks each OS for its own face.

04 — CONTROLLED COMPARISON

Same screen, same colour, same layout — typography only

Identical markup and spacing; only family, size, weight, line-height and tracking differ. This is the vacancy detail screen at 390px.

VARIANT A — SYSTEM-NATIVE (PROPOSED)

Hotel Adlon Berlin · Mitte

Zimmerreinigungskraft in Vollzeit

14,50 € pro Stunde

Englisch akzeptiert | 1,8 km | Frühdienst

Tägliche Reinigung der Gästezimmer und öffentlichen Bereiche. Einarbeitung in der ersten Woche, Arbeitskleidung und Verpflegung während der Schicht inklusive.

Antwortet meist innerhalb eines Tages.

☆ Jetzt bewerben

27px/600 title, 16px/1.55 body, 500 on the primary button. Compound word wraps with the counters intact.

VARIANT B — CURRENT KLINNOVA SYSTEM

HOTEL ADLON BERLIN · MITTE

Zimmerreinigungskraft in Vollzeit

14,50 € pro Stunde

Englisch akzeptiert | 1,8 km | Frühdienst

Tägliche Reinigung der Gästezimmer und öffentlichen Bereiche. Einarbeitung in der ersten Woche, Arbeitskleidung und Verpflegung während der Schicht inklusive.

Antwortet meist innerhalb eines Tages.

☆ Jetzt bewerben

24px/700 title at -0.04em, 15px/1.75 body, 700 button, uppercase-tracked eyebrow. More insistent; the tracking closes the compound word up.

VARIANT C — DEDICATED BRAND FONT (INTER TIGHT, ILLUSTRATIVE)

Hotel Adlon Berlin · Mitte

Zimmerreinigungskraft in Vollzeit

14,50 € pro Stunde

Englisch akzeptiert · 1,8 km · Frühdienst

Tägliche Reinigung der Gästezimmer und öffentlichen Bereiche. Einarbeitung in der ersten Woche, Arbeitskleidung und Verpflegung während der Schicht inklusive.

Antwortet meist innerhalb eines Tages.

☆ Jetzt bewerben

Same metrics as A, one face on every platform. Inter Tight is loaded here purely so this panel is a real specimen — that extra webfont request is precisely the cost being weighed below.

Recommendation: A over C

CRITERION	A — SYSTEM-NATIVE	C — DEDICATED WEBFONT
Licensing	None. Each OS supplies its own face; nothing is hosted or redistributed.	Requires a licence review even for open fonts, and a decision about self-hosting versus CDN.
Performance	Zero bytes, zero round-trips, first-frame paint, no layout shift.	40–90 KB per subset, a FOIT/FOUT strategy to pick, and a real reflow risk on slow connections.
Consistency	Deliberately varies by platform — the trade being made.	Pixel-identical everywhere; the one genuine advantage.
Character	Native, calm, unmistakably at home on the device.	Slightly more distinct as a brand, slightly less native.
Accessibility	Respects the user's platform text rendering and any OS-level font preferences.	Neutral, provided `font-display: swap` is set.
Verdict	**Recommended.** The variation between platforms is invisible to any individual user, who only ever sees one.	Not justified. A second font dependency for cross-platform pixel-identity is not worth the cost to this audience.

05 — TYPE SCALE, WEIGHT, LINE-HEIGHT, TRACKING

The proposed system, shown at size

Arbeit, die dich sieht

display · 40–56px fluid · 600 · 1.08 · -0.028em

Weight system

ROLE	WEIGHT	NOTE
Display, page title, section title	600	The ceiling. 700 and above leave the system.
Card title, subheading, form label	500	Size and position already separate these from body.
Body, secondary text, metadata	400	Never 300 for content a candidate must read.
Navigation, tabs	400 resting / 500 active	Weight is one of three active signals, never the only one.
Buttons	500 primary and secondary / 500 tertiary	Medium, not semibold. Hierarchy comes from fill and border, not weight.
Status labels	500	Bumped to 600 only at 12px or below, where legibility demands it.
Numerals in tables	400 with `font-variant-numeric: tabular-nums`	Employer tables and any stat readout. Not applied globally — tabular figures look mechanical in prose.

Line-height by role

ROLE	VALUE	RATIONALE
tight — display	1.08–1.12	Safe for two- and three-line wraps; tested against German compounds.
heading — titles	1.15–1.3	Scales inversely with size; 1.3 at card-title size prevents cramping.
body — product UI	1.55	Tighter than today's 1.65, which read loose in compact UI.
relaxed — long-form and legal	1.7	Where 1.65 was actually right. Now scoped to where it belongs.
compact — buttons, nav, chips	1.2–1.3	Single-line elements; keeps target heights predictable.
help and error text	1.5	Never below 1.45 — error text is read under stress.

Letter-spacing

CONTEXT	TRACKING	RULE
Display, 40px+	-0.028em	The only place tracking goes meaningfully negative.
Titles, 25–32px	-0.021em	Replaces today's -0.03em to -0.05em.
Subheads, 17–22px	-0.008em to -0.012em	Barely perceptible; keeps counters open.
Body and below	0	Nothing under 17px receives negative tracking.
Buttons, chips, status	0	No tracking as a styling device.
Uppercase eyebrows	0.06em, sparingly	Down from 0.12em, and confined to section eyebrows — never status or navigation.

Spacing rhythm — the part that carries most of the effect

RELATIONSHIP	GAP	NOTE
Heading → supporting text	8px	Deliberately tight; they are one unit.
Heading block → first content block	24px	Three times the internal gap makes grouping unambiguous.
Label → input	6px	Bound pair.
Input → help or error text	6px	Same pairing logic.
Field group → field group	20px	Clear separation without a divider.
Paragraph → paragraph	16px, or 20px in long-form	Never a blank line.
Card title → metadata	4px	Metadata belongs to the title.
Card content → card action	20px	Enough that the action reads as a decision.
Page title → primary action	24px mobile / 32px desktop	—
Status → supporting information	8px	—
Section → section	56px mobile / 72–92px desktop	The single biggest contributor to a calm page.

Line length

CONTENT	MAX WIDTH	NOTE
Hero copy	26–32ch	Short by design; wraps to two or three composed lines.
Body text	62–68ch	The default ceiling everywhere.
Long-form and legal	68–72ch (~640–700px)	Must never span a 1440px viewport.
Card descriptions	Card width, 3-line clamp	Full text lives on the detail screen.
Form help text	Field width, 48ch ceiling	—
Employer table cells	No ceiling; truncate with a tooltip	Density over reflow in operational UI.

Responsive strategy

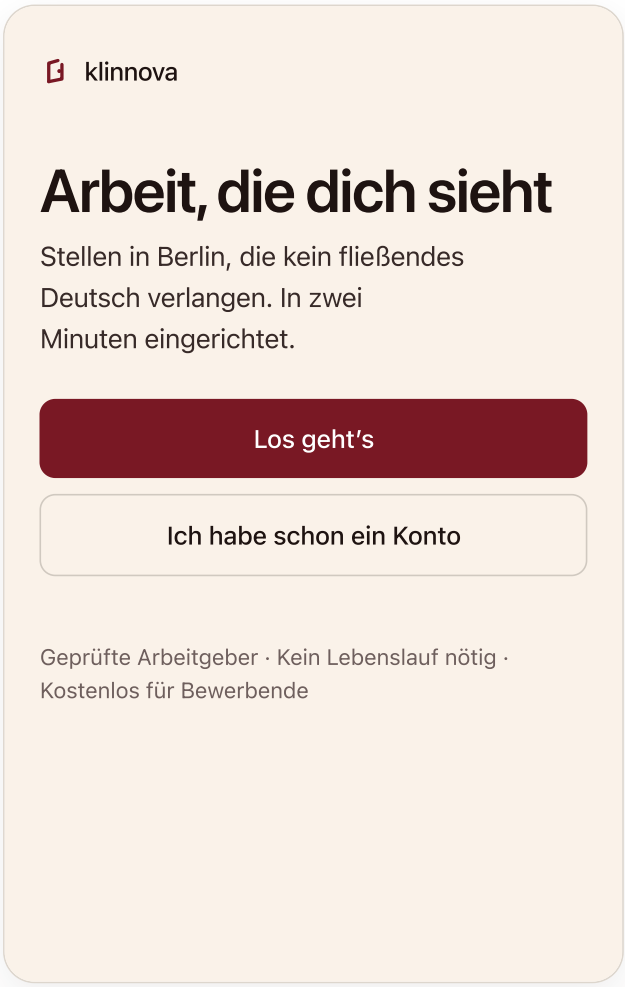

TIER	TECHNIQUE	DETAIL
Display	Fluid, `clamp()`	`clamp(2.25rem, 1.6rem + 2.6vw, 3.5rem)` — 36px at 320px, 56px at desktop. The only genuinely fluid step.
Page title	Two fixed steps	28px below 768px, 32px above. Predictable wrapping beats smooth scaling here.
Section and card titles	Fixed	25px and 20px at every width. Fluid sizing on these caused unpredictable German wraps in testing.
Body, secondary, caption	Fixed	16 / 14 / 12.5px everywhere, mobile included. Never scaled down to make a layout fit.
Employer dense UI	Fixed, one step down	15px body in tables only; the documented exception.

06 — CANDIDATE VALIDATION

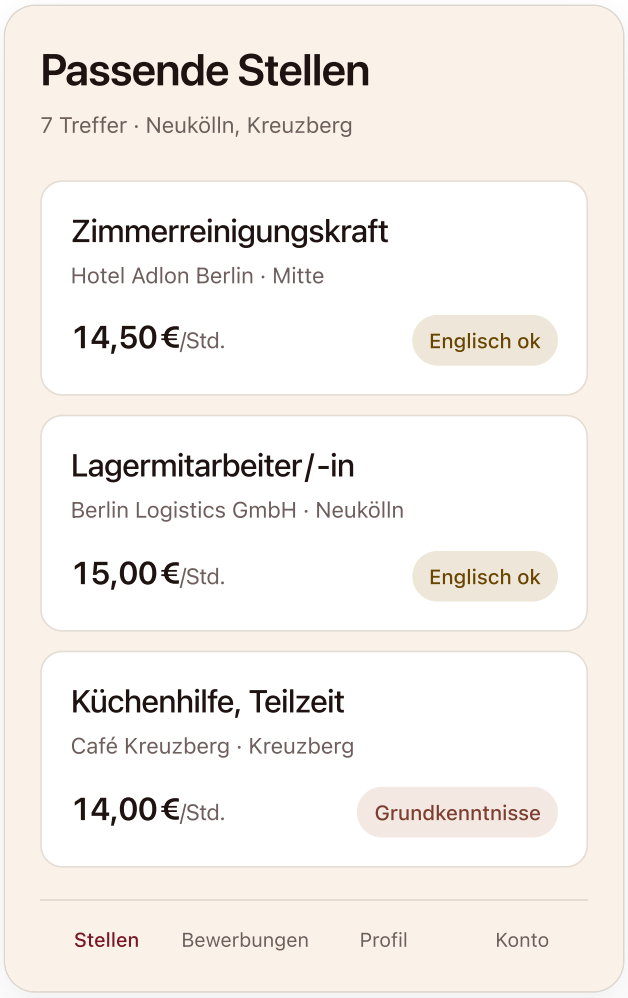

The proposed system on candidate surfaces

All frames at 390px in Variant A. German content where a candidate would really meet it.

A — LANDING, MOBILE

B — MATCHES, MOBILE

D — APPLICATIONS AND STATUS, MOBILE

430PX

Passende Stellen

Zimmerreinigungskraft in Vollzeit

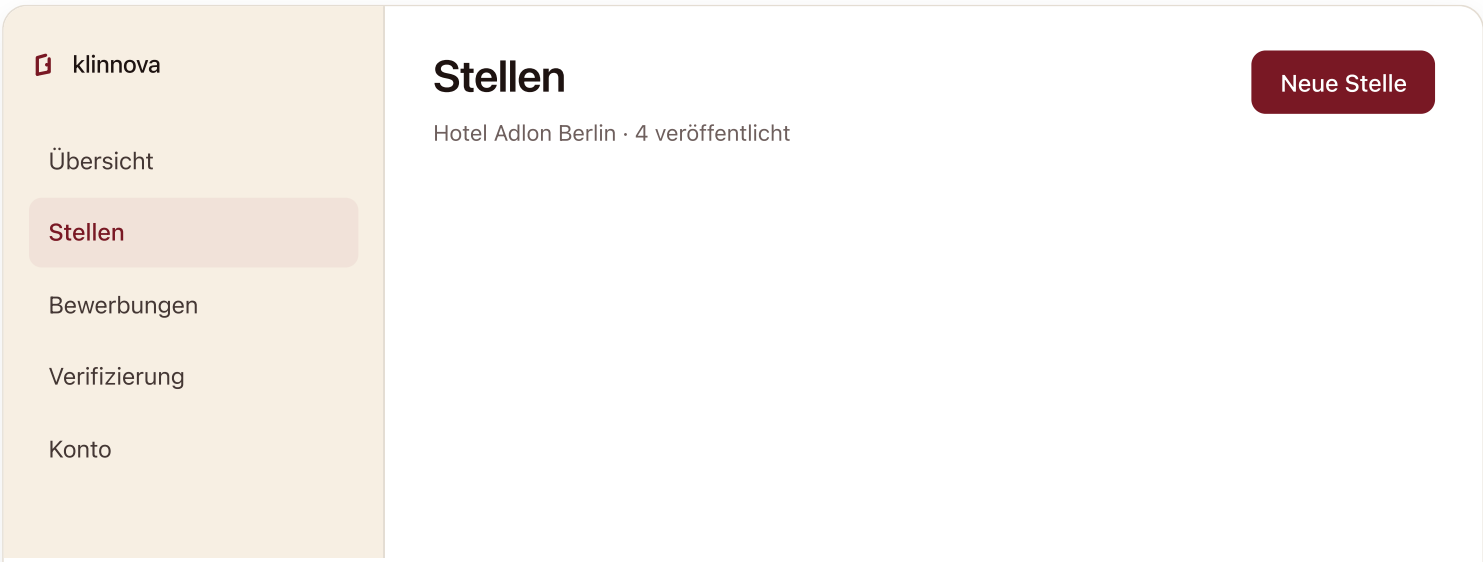

Einarbeitung in der ersten Woche, Arbeitskleidung inklusive.

Result. "Zimmerreinigungskraft" (21 characters) holds on one line at 375px and above at 20px/500, and wraps cleanly at 320px without hyphenation. At the old 24px/700 with -0.04em it overflowed at 320px. Longer real strings ("Lagermitarbeiter/-in", "Produktionsmitarbeiterin") behave the same. Recommendation for Development: allow `hyphens: auto` with `lang="de"` on vacancy titles as a safety net rather than shrinking the type.

07 — EMPLOYER VALIDATION, DESKTOP

Density without shrinking everything

Same type system, one documented step down for table body (15px). Tabular numerals in the count and date columns.

Berufserfahrung

Zwei Jahre Reinigung in einem Wohnheim in Lagos, ein Jahr Hotelreinigung in Berlin-Wedding. Arbeitet gern im Frühdienst.

Zum Gespräch einladen | Später entscheiden | Ablehnen

Result. Three action tiers separate cleanly at a single weight (500) because fill, border and colour carry the hierarchy. Table headers at 12.5px/500 with no tracking read as labels rather than eyebrows. Status pills keep 600 because they sit at 12.5px — the documented exception in the weight table.

09 — LONG-FORM AND LEGAL VALIDATION

Where the relaxed line-height belongs

DESKTOP — 68CH MEASURE ON A 1440PX VIEWPORT

Deine Telefonnummer und deine Berufserfahrung werden erst erhoben, wenn du dich auf eine Stelle bewirbst.

Result. 1.7 line-height and a 68ch ceiling make a dense German privacy notice genuinely readable, including "Arbeitserlaubnisstatus" at 22 characters. The same 16px body size serves both viewports; only the measure changes.

Assessment against the proposed system

CHECK	RESULT	DETAIL
Primary text contrast	Pass	`oklch(0.2 0.02 30)` on cream — roughly 13.8:1. Comfortably AAA.
Body text contrast	Pass	Body moves from muted to `oklch(0.3 0.02 30)`, roughly 10.5:1. The lighter impression comes from weight and space, not from dimming text.
Secondary text	Pass	`oklch(0.5 0.02 30)`, roughly 4.6:1 — AA at 14px+. Never used for anything a candidate must act on.
Disabled text	Pass with caveat	0.45 opacity fails AA by design. Disabled controls must always be paired with an explanation in full-contrast text nearby.
Error text	Pass	`oklch(0.46 0.16 25)` at 14px/400, roughly 5.4:1, plus a border change and an icon — never colour alone.
Interactive text	Pass	Oxblood at 500 weight, roughly 7.1:1; underline on hover, focus ring on focus.
Minimum sizes	Pass	12.5px floor for captions; 14px for anything a candidate reads to make a decision; 16px body.
200% zoom	Pass	Fixed body sizes and ch-based measures reflow without horizontal scroll. The `clamp()` display step is the only fluid value and is bounded at both ends.
Long German strings	Pass	Validated at 320px in section 06. `hyphens: auto` with `lang="de"` recommended as a safety net.
Text clipping	Pass	No fixed heights on text containers; status pills use `white-space: nowrap` with the row allowed to grow.
Focus visibility	Pass	2px ring plus a border-colour shift on every text control; visible against both cream and white surfaces.
Rendering variance	Accepted	The system stack renders differently per platform by design. Since 400/500/600 exist in every face in the stack, hierarchy is preserved everywhere; only the letterforms differ.

Text colour roles

ROLE	VALUE	USE
Primary	oklch(0.2 0.02 30)	Headings, card titles, entered values, table cells
Body	oklch(0.3 0.02 30)	Paragraphs and descriptions
Secondary	oklch(0.5 0.02 30)	Metadata, help text, timestamps, resting nav
Disabled	oklch(0.6 0.02 30)	Inactive controls only, never content
Inverse	oklch(0.98 0.008 75)	On oxblood fills
Interactive	oklch(0.38 0.13 20)	Links, active nav, inline actions
Success / warning / error	0.4 0.09 75 / 0.46 0.11 60 / 0.46 0.16 25	Status text; darkened from the fill values to hold contrast as text

No palette change is proposed. These are text-role assignments within the approved colours, adjusted only where a fill colour was too light to serve as text.

11 — PROPOSED TOKENS

Primitives and, more importantly, semantic roles

Not implemented. Proposed for Development review.

PRIMITIVE	VALUE
`--font-family-sans`	-apple-system, BlinkMacSystemFont, "Segoe UI", Roboto, Helvetica, Arial, sans-serif
`--font-size-xs`	0.781rem (12.5px)
`--font-size-sm`	0.875rem (14px)
`--font-size-base`	1rem (16px)
`--font-size-lg`	1.0625rem (17px)
`--font-size-xl`	1.25rem (20px)
`--font-size-2xl`	1.5625rem (25px)
`--font-size-3xl`	1.75rem → 2rem (28→32px at 768px)
`--font-size-display`	clamp(2.25rem, 1.6rem + 2.6vw, 3.5rem)
`--font-weight-regular`	400
`--font-weight-medium`	500
`--font-weight-semibold`	600
`--line-height-tight`	1.1
`--line-height-heading`	1.2
`--line-height-body`	1.55
`--line-height-relaxed`	1.7
`--letter-spacing-display`	-0.028em
`--letter-spacing-heading`	-0.021em
`--letter-spacing-body`	0

SEMANTIC ROLE	COMPOSITION
`--type-display`	display / 600 / tight / display tracking
`--type-page-title`	3xl / 600 / 1.15 / heading tracking
`--type-section-title`	2xl / 600 / 1.2 / heading tracking
`--type-card-title`	xl / 500 / 1.3 / -0.012em
`--type-body`	base / 400 / body / 0 · text-body colour
`--type-body-secondary`	sm / 400 / 1.5 / 0 · text-secondary colour
`--type-body-relaxed`	base / 400 / relaxed / 0 · long-form and legal only
`--type-label`	lg / 500 / 1.4 / -0.008em · form labels
`--type-button`	base / 500 / 1.25 / 0
`--type-nav`	sm–base / 400 resting, 500 active / 1.3 / 0
`--type-caption`	xs / 500 / 1.45 / 0 · text-secondary colour
`--type-status`	xs / 600 / 1.3 / 0 · always with a fill and a text label
`--type-table-cell`	0.9375rem (15px) / 400 / 1.45 / 0 · tabular-nums · employer only
`--type-eyebrow`	xs / 500 / 1.3 / 0.06em uppercase · section openers only

The semantic layer is the deliverable. Components should reference `--type-card-title`, never a raw size and weight pair — that is what makes the weight ceiling enforceable rather than aspirational.

12 — MIGRATION IMPACT, RISKS, PERFORMANCE

What changing type actually costs

AREA	IMPACT	NOTE
Font loading	Removal	The Google Fonts link and preconnect come out. Net simplification and a measurable first-paint win.
Type tokens	Restyle	Values change; token names largely persist. New additions are the semantic layer and the long-form line-height.
Every heading	Restyle	Mechanical: 700 → 600, tracking loosened. No structural change.
Body copy	Restyle	15px → 16px, 1.65 → 1.55. Watch for containers with fixed heights sized against the old metrics.
Vertical rhythm	Restyle, broad	The largest diff by line count and the biggest driver of the result. Best done alongside the token change, not after.
Status and eyebrow labels	Restyle	Tracking drops from 0.12em to 0 or 0.06em; uppercase confined to section eyebrows.
Employer tables	Additive	One `font-variant-numeric` declaration on numeric columns.
Long-form pages	Additive	A max-width ceiling and the relaxed line-height role.
Components	None	No component structure, colour or behaviour changes.
Wordmark	Open	The Option 2 lockup was drawn in DM Sans 600. It should either keep DM Sans as a wordmark-only asset (recommended — a logo is an asset, not UI text) or be redrawn. Flagged in section 13.

Risks and trade-offs

RISK	MITIGATION
Cross-platform inconsistency — Klinnova looks slightly different on Android, Windows and iOS	Accepted deliberately. Any individual user sees exactly one rendering. Hierarchy is metric-driven, so it holds in all three.
Lighter type reads as less authoritative to some employers	Validated in section 07: employer surfaces keep full-contrast primary text and clear action hierarchy. Worth a check with two or three beta employers before rollout.
The 16px body increase pushes content below the fold on small screens	Accepted. Comprehension outranks density on candidate screens, and section 06 shows the layouts still hold at 320px.
Design-system divergence — the bound system specifies DM Sans	Reported, not resolved unilaterally. Section 13.
Partial adoption looks worse than either state	Ship the token change and the rhythm change together, screen group by screen group, rather than family-first.

Performance

FACTOR	SYSTEM-NATIVE (PROPOSED)	WEBFONT (CURRENT AND VARIANT C)
Bytes over the network	0	40–90 KB per weight subset
Requests	0	1 stylesheet + 1–4 font files
First text paint	Immediate	Blocked, or swapped after a flash
Layout shift	None	Real, unless metric-matched fallbacks are configured
Caching	Not applicable	Good on repeat visits, no help on first
Slow-connection behaviour	Unaffected	The worst case, and the case this audience most often has

13 — DECISIONS REQUIRED

Founder

- **Adopt Variant A (system-native) over Variant B (current) or C (dedicated font).** The core decision in this document.
- **Accept deliberate cross-platform variation.** Klinnova will not look pixel-identical on iOS, Android and Windows. This is the price of the character being asked for, and it is worth naming out loud rather than discovering later.
- **Confirm the divergence from the bound design system.** That system specifies DM Sans and tighter heading tracking. This proposal departs from both. Reported per instruction rather than applied silently — it needs an explicit call, since it affects any other surface built on that system.
- **Wordmark treatment.** Recommendation: keep the Option 2 lockup in DM Sans as a fixed brand asset (an SVG, not live text), so the wordmark stays constant while UI type goes native. The alternative is redrawing it, which reopens an approved decision unnecessarily.
- **The 16px body increase** trades a little density for comprehension on candidate screens. Recommended, but it is a product-feel decision as much as a typographic one.

Development

- Can the semantic type layer be introduced as tokens that components consume, rather than per-component overrides? The weight ceiling is only enforceable if so.
- Are there containers with fixed heights sized against 15px/1.65 body that would clip at 16px/1.55?
- Is `lang="de"` set correctly on German content, so `hyphens: auto` can act as the safety net for compound words?
- Any surfaces where the removed Google Fonts link is also serving DM Serif Display for another purpose?
- Confirm `font-variant-numeric` support requirements for the employer tables against the browser support matrix.

Handoff recommendation

Design-only; nothing here should be implemented until the five founder decisions above are settled. On approval, this document plus the existing Klinnova design-system specification are ready for technical discovery. Sequence the work as: semantic token layer first, then the family swap, then the vertical rhythm pass, screen group by screen group — candidate surfaces first, since that is where the comprehension benefit lands. No product behaviour, palette, IA, workflow, status vocabulary or logo decision is changed by this pass.
